

Mihir J. Panchal

Full Stack Web Developer, Full Stack Mobile Developer.

I am Mihir Panchal, a full-stack web and mobile developer. I am pursuing my MSc.IT degree. Looking forward to projects to work on to enhance my skills and get experience in field of information and technology. I also find fun designing UI for websites and mobiles.

Projects

Drive2Park

Drive2park makes it easy to find and book parking space for any location. This was my first group project as well as first major assigned by IIDE (Indian Institute of Digital Education). I mainly worked with the frontend part along with Akshay and on the backend, we had Prashant Paddune.

Covid-19 Tracker

Another API based REACT.js application but for a change I used Material-UI to style this application. This was a small challenge for me as I was new to this Material-UI and it took a while for me to understand its styling concepts.

YouTube Clone

I went for this project as to get better hands-on using APIs. The main challenge I faced here is making the streaming column static. As it would not be a good user-experience that while a video the player scrolls while playing.

Technova

This project is website for the college fest Technova. This is a static website that holds the information for the fest and its events.

TODO 2.0

This is my first project in field of mobile development. This project is built with react-native libraries, that helps me to develop this application cross platform using single code base. This is full stack application with NodeJS and express in the backend.

Work Experience

Mihirpanchal.com (my portfolio site)

I made this portfolio site to share my work and experience gained. Here you can see my personal projects and client work. I will also be starting with blogging here, in which would discuss various topics related to my work done and also some other interesting stuffs.

Muskanlabel.com (e-commerce website)

Muskanlabel.com is a client-based e-commerce website. This website is currently hosted on ec2-instance of AWS with Google domains. This website includes payment gateway from Paytm, email services integrated with SendGrid APIs and Cloudinary for media storage.

Exam-Portal

This is an ongoing client-based project built with mern-stack. This project has mainly two user-interfaces one for the web for the admins, sub-admins and the center-admins and the other for mobile devices. The exams are MCQ based and will be conducted on mobile devices. This portal has email services integrated with SendGrid APIs, Cloudinary for media storage and payment-gateway integrated Paytm APIs.

Urban Elements

This is a Portfolio site for a client. This is an interior design-based company that needed to showcase their work through their portfolio site. I used Reactjs to build the frontend and integrated emiljs for the email services.

Address:

Pleasant Park Mira Road (E),
Thane 401107,
India.

Phone: 7700983123

Email-Id: mp06121@gmail.com.
